

## A B S T R A C T

## AN INTER-LAMINAR SUPPORT

5       The invention relates to a vertebral support placed  
between the laminae of the vertebrae. It is constituted by  
an anterior zone (1) inserted between the laminae of the  
vertebrae, suitable for giving an anatomical intervertebral  
spacing, and a posterior zone (2) providing mobility in the  
10   region fitted with the implant. Retaining means limit  
displacement of the support by means of shoulders (3, 13)  
projecting from the anterior zone (1) of the support, and  
by means of two transverse projections (8).
